

Verifying the mySCADA PRO Manager installer (Linux)

Before you run the installer, check that it comes from us and was not modified on the way to you. The installer is signed with a GPG signature. The check takes about a minute.

1. Download the files

Download these two files into the same folder:

- the installer, for example **mySCADAPROManager9_2.2_2026101310_x64.sh**
- the signature, which has the same name with the extension **.sig**, for example **mySCADAPROManager9_2.2_2026101310_x64.sh.sig**

2. Import our public key

Copy the whole block below, paste it into a terminal and press Enter:

```
gpg --import <<'EOF'
-----BEGIN PGP PUBLIC KEY BLOCK-----

-----END PGP PUBLIC KEY BLOCK-----
EOF
```

3. Verify the installer

```
gpg --verify mySCADAPROManager9_2.2_2026101310_x64.sh.sig \
mySCADAPROManager9_2.2_2026101310_x64.sh
```

4. Check the result

A correct result contains these two lines:

```
gpg: Good signature from "mySCADA"
Primary key fingerprint: 3DE2 3677 5DA7 5451 B003 C504 A2B9 F3C6 52AF 505D
```

The fingerprint must match exactly the fingerprint printed in this document:

3DE2 3677 5DA7 5451 B003 C504 A2B9 F3C6 52AF 505D
--

The warning *This key is not certified with a trusted signature* is normal and can be ignored, as long as the fingerprint matches.

If the check fails

If gpg prints **BAD signature**, or the fingerprint is different, do not run the installer. Download it again from our website and repeat the check. If it still fails, contact our support.
