

myPANEL

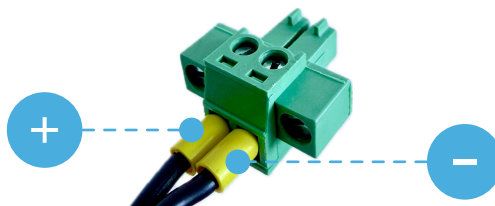

QUICK GUIDE

1. Package content

- 1x myPANEL
- 1x Package with necessary accessories for installation
- 1x Quick guide

2. Powering up

Before you install and wire any device, make sure to disconnect the electric power from the system! Strip the ends of the cable so it could be slipped into the supplied green connector. Do not forget to check the correct polarity! Tighten the terminal screw using a small flat-blade screwdriver.

Plug electricity cable into myPANEL which must be in the range 9~36 V DC.

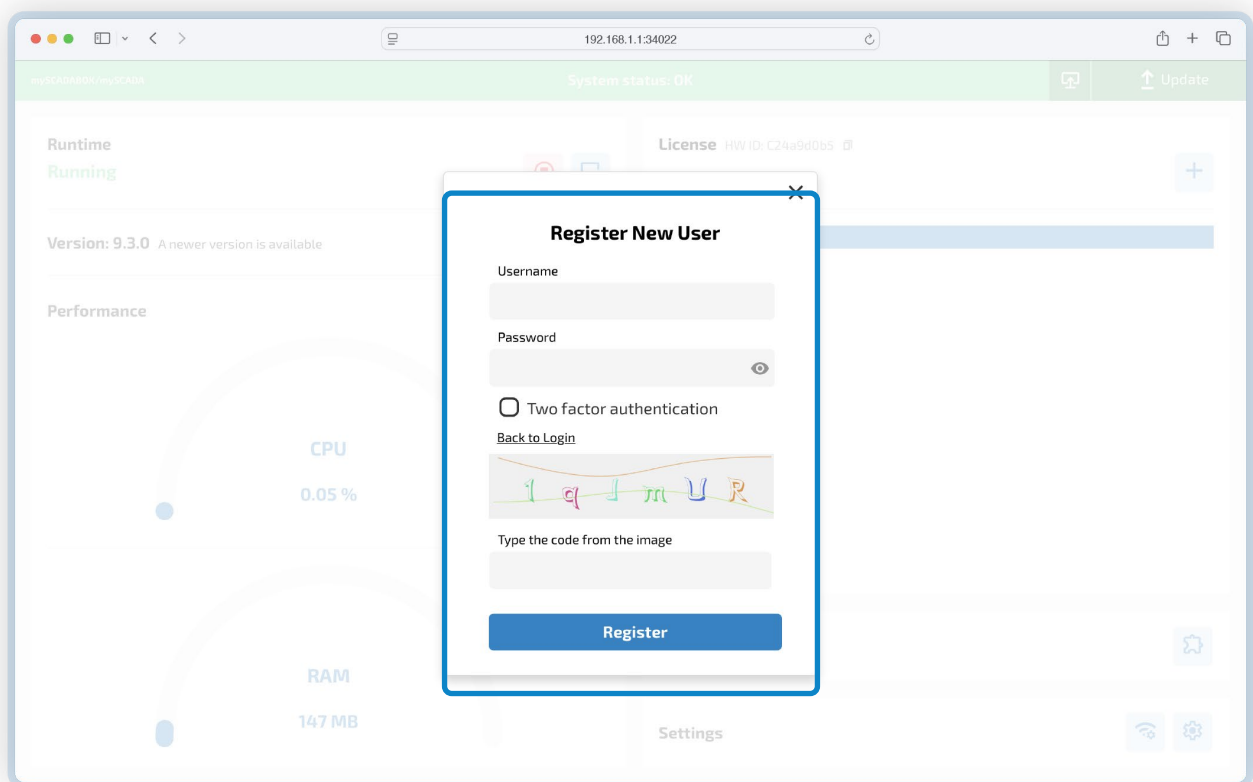

3. Warranty, Lifetime

- The product includes a **1 year manufacturer's warranty** starting from the date of purchase.
- The device also comes with **2 years of guaranteed software and security update support**, ensuring ongoing system reliability and compliance with security standards.

4. First boot

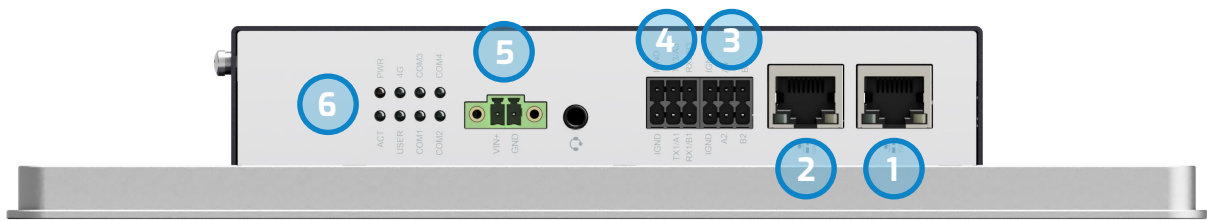

- **ETHERNET PORT 1** is by default set to IP: **192.168.1.1**, on this port is also running DHCP server which means if you plug in your laptop for example, to this port, you will get IP automatically in the same IP range so you should be able to directly access the **192.168.1.1:34022** which is the IP of mySCADA Manager where you can adjust the network settings etc.
- **ETHERNET PORT 2** is by default set to DHCP
 - which means it will take IP address from your DHCP server
- **mySCADA manager** is available on all the interfaces on port **34022**
- **HMI – Runtime** is by default available on port **80** (http:) or **443** (https:)

On first connection, you will be asked to create administrator account. Please fill in username and password. For tighter security, we recommend to use two factor authentication.

5. Hardware features

Features	Description
1	100Mbit Ethernet "LAN" port
2	1Gbit Ethernet "WAN" port
3	Not used
4	Not used
5	DC Power IN 9~36V
6	Indicator LED's

Features	Description
1	SD card slot
2	SIM slot
3	Wi-Fi/BT antenna port

Features	Description
1	Grounding point
2	Reset button (system restart)
3	2x USB 2.0 port
4	Not used
